About Me

First-year Computer Science student at ICCT Colleges with a strong foundation in Object-Oriented Programming (OOP) and web development. Passionate about building functional applications, ranging from console-based Java systems to hardware-integrated IoT web controllers.

Education

Dela Paz National High School (2019-2024)

San Juan Summolong Elementary School (2016-2019)

ICCT Colleges - Taytay Campus | 2024 - Present BSIT 1st year of Collage

Project

LEGO Backhoe Controller
2026-2027

JavaScript, HTML, CSS, ESP32, C++

- Developed a web-based dual-arm control system for a custom LEGO robotics project.
- Integrated live ESP32-CAM video streaming and utilized the Web Serial API for hardware-to-browser communication.
- Designed a responsive UI with custom keyboard shortcuts, real-time telemetry HUD, and dynamic theme switching.
- Live Demo: johncint.github.io/Robothinks-Project-Lego

Java Banking System
2026-2027

Java, OOP

- Built a robust console-based banking application applying core OOP principles (Inheritance, Polymorphism, Encapsulation).
- Implemented distinct account types (Savings, Checking) with custom withdrawal fees and interest calculation logic.
- Utilized modern Java features including switch expressions and pattern matching for clean, readable code.

Personal Portfolio Website
2026-2027

HTML, CSS, JavaScript

- Designed and developed a fully responsive portfolio website from scratch without frameworks.
- Implemented advanced features including a custom command palette (⌘K), image lightboxes, and a dark/light theme toggle using CSS variables and localStorage.
